

HARD-CEM wins Most Innovative Product award at the 2007 World of Concrete

HARD-CEM was recognized as the Most Innovative Product in Concrete Making Materials as both the Experts' and Attendees' choice at the 2007 World of Concrete. "Cementec Industries is very pleased with the industry recognition for HARD-CEM. HARD-CEM is the result of an extensive research and development program followed by numerous and varied project applications to prove the performance characteristics and benefits of our integral concrete hardener. We have also invested in a number of third party engineering studies. It is gratifying that our hard work and investment is being recognized", says Joseph Kiss, Vice President & General Manager of Cementec Industries.

The MIP awards were voted by a panel of industry experts and attendees to the World of Concrete show in Las Vegas in January. This event was attended by 91,000 in the concrete construction industry. The tradeshow involved 1,700 exhibitors occupying over 900,000 square feet.

HARD-CEM is engineered to provide concrete with superior hardness and improved durability for demanding construction projects. HARD-CEM was developed by Cementec Industries in partnership with Teck Cominco for concrete subjected to mechanical (direct or waterborne) action causing erosion. Cementec is an award winning engineering company with special expertise in research and development of proprietary products for the oil & gas and construction industries.
